

PROJECT OVERVIEW:

Taxiway Mike 2 – Drainage Improvements
Air National Guard – Jacksonville International Airport, Florida

CORE was contracted to install reinforced concrete drain pipe at the Air National Guard facility located at the Jacksonville International Airport. The intent of the project was to tie into and extend the current drain pipe to allow greater shoulder area along the taxiway to support aircraft.

Special considerations related to this project included coordination of flight line work with security personnel and demobilization/remobilization for an approaching hurricane.
